

Drink up

Drink-Pure Pty. Ltd.

Ultra pure table water

(07) 4659 0400

What's special about this water?

Drink up®, like its cousin **Drink-Pure**®, is also an ultra pure drinking water, and is produced using an extra fine reverse osmosis process. **Drink up**® like **Drink-Pure**® also has a 'lively' rainwater 'taste', because it

contains no invisible dissolved mineral and metals like bottled spring water, or town and bore waters. Additionally, **Drink up**® contains none of the problem microbiological pathogens, heavy metals, chemicals, toxins, and other dissolved items common in today's ground waters. For lots more see www.drinkpure.com.au

Next is ozone treatment

Following production of the ultra pure **Drink up**® drinking water, it is treated both before and during bottling with the finest natural product known to man. It is the super oxygen known as ozone (O₃). Ozone treatment provides the 'lively taste' of rainwater, and also insures the super oxygenated water is totally pathogen free.

Drink up® packages available

There are many packages and ways to drink it. One way is from a bottle **with its own tap** on the side, plus a variety of pottery dispensers and **cooler types** for the floor or bench. Even **hot** for coffee & tea.

Most waters look nice and clear.

Yes, until subjected to a simple conductivity test, which exposes waters with a high TDS (total dissolved solids). TDS is the sum of all of the invisible dissolved minerals & metals in the water people drink. More on www.drinkpure.com.au

TEST YOUR DRINKING WATER – Free

If you could see it would you drink it?

Talk to the people at **Drink-Pure®**. The above test takes only a few minutes, and can be done with any waters you have at both homes & businesses, and it's *Free*.

Drink up® being an ultra pure drinking water **contains less than 5 parts per million (ppm) of totally dissolved solids (TDS).**
